INVESTMENT PERSPECTIVE by Paul Martin, Managing Partner

Accommodative Fed Counterbalances Ongoing Economic and Political Uncertainties

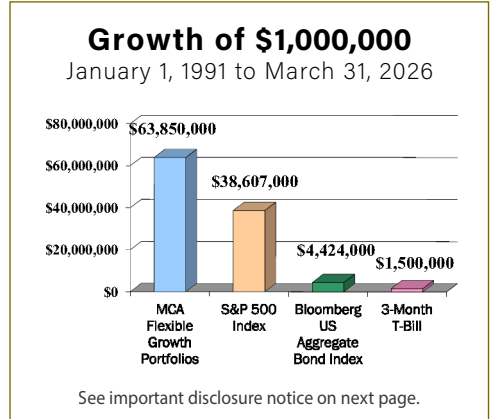

June 11, 2026

Despite ongoing economic and political uncertainties, such as higher energy prices and the war with Iran, the stock market has trended higher in the second quarter and is now just a little below record highs. This is because the Federal Reserve has remained fairly accommodative, thus allowing the stock market to stay focused on the long-term potential for economic growth. However, unpredictable corrections and short-term bear markets are always possible, so it's a coin flip as to the probability of the stock market being up or down in the near-term. That said, as long as the Fed is accommodative, the bias is to the upside, eventually.

Of course, trying to predict the short-term performance of financial markets is often a fool's errand. That's why at Martin Capital we invest in what we consider to be great companies and hold on to

them, or *buy and hold*, as long as we believe that they can grow their businesses significantly over the long run. However, we do have a hedging strategy based on the yield curve that triggers when the Fed Funds rate is too tight relative to the one-year T-Bill. This has happened five times since 1953. The last signal, in October 2007, led into the worst recession and bear market since 1931. The hedge is based on buying slightly out-of-the-money put options that will counter stock market losses. And then, since we remain

fully invested, we can still participate in higher stock market returns, minus the options cost, even if the hedging signal is wrong for the first time in 72 years. It's essentially like buying insurance for your car or house. Please let me know if you have any questions or thoughts. And always remember that the S&P 500 compound average annual return since 1926 through the end of last year is up 10.4% per year (see our annually updated presentation "Long-Term Performance of Stocks, Bonds, T-Bills & Inflation, 1926 - 2024" at www.martincapital.com).

COMPARISON OF INVESTMENT RESULTS

January 1, 1991 to March 31, 2026

	Martin Capital Advisors ¹	S&P 500	Russell 3000	Bloomberg U.S. Aggregate Bond Index	3 Month T-Bill	Consumer Price Index
Total ²	6385.0%	3860.7%	3885.5%	442.4%	150.0%	146.8%
Avg. ³	12.6%	11.0%	11.0%	4.9%	2.6%	2.6%

¹Total performance, net of commissions, fees, and expenses of all Martin Capital Advisors' Flexible Growth Portfolios.

²Total compounded return, including reinvestment of dividends and interest. ³1991-2026 annualized return.

ADDITIONAL DISCLOSURE NOTICE

MARTIN CAPITAL ADVISORS, LLP (MCA) is a registered investment advisor based in San Antonio, Texas, founded in 1989. MCA specializes in managing customized equity and balanced investment portfolios with an all-cap equity strategy to grow capital, as well as balanced strategies to grow capital with less volatility.

MCA Flexible Growth Portfolios Composite consists of all fully discretionary portfolios that are invested in publicly traded companies with the goal of maximizing long-term returns. These portfolios are classified as an all-cap core strategy, but predominately invest in large and mid-cap stocks, blending the characteristics of both growth and value investing. Each portfolio typically invests in 30 to 40 stocks that are rigorously selected to meet our core philosophy of investing in companies with an enduring competitive advantage that offer growth at a reasonable price. These portfolios are for investors who are willing to accept significant short-term volatility in the pursuit of superior long-term returns. In addition, from time to time this strategy may utilize material amounts of leverage, options, bonds and strategic cash reserves. The benchmark for this composite is the S&P 500 Index, which is an index of the 500 leading companies in the U.S. and is designed to reflect the risk and return characteristics of the large-cap U.S. equities universe. An options hedging strategy is available for this portfolio.

MCA Balanced Portfolios Composite consists of all fully discretionary portfolios that are invested in equities and fixed income securities with a target asset allocation of 75% equities and 25% fixed income. These portfolios are for investors with a long-term investment horizon who seek to grow capital, but want to do so with less short-term volatility than the MCA Flexible Growth Portfolios. The equity investments in the portfolios are classified as an all-cap core strategy and are managed in the same way as the MCA Flexible Growth Portfolios. Fixed income investments include both individual and ETF fixed income securities. In addition, from time to time this strategy may utilize material amounts of leverage, options, bonds and strategic cash reserves. The benchmark for this composite is a blend of 75% S&P 500 Index and 25% Bloomberg U.S. Aggregate Bond Index, rebalanced monthly. The S&P 500 is an index of the 500 leading companies in the U.S. and is designed to reflect the risk and return characteristics of the large-cap U.S. equities universe. The Bloomberg U.S. Aggregate Bond index is made up of the Bloomberg U.S. Government/Corporate Bond Index, Mortgage-Back Securities Index, and Asset-Backed Securities Index, and only includes securities that are investment grade quality or better, have at least one year to maturity, and have an outstanding par value of at least \$100 million. An options hedging strategy is available for this portfolio.

MCA Conservative Portfolios Composite consists of all fully discretionary portfolios that are invested in equities and fixed income securities with a target asset allocation of 50% equities and 50% fixed income. These portfolios are for investors who prefer to significantly reduce short-term volatility in their investments rather than maximize long-term returns. The equity investments in the portfolios are classified as an all-cap core strategy and are managed in the same way as the MCA Flexible Growth Portfolios. Fixed income investments include both individual and ETF fixed income securities. In addition, from time to time this strategy may utilize material amounts of leverage, options, bonds and strategic cash reserves. The benchmark for this composite is a blend of 50% S&P 500 Index and 50% Bloomberg U.S. Aggregate Bond Index, rebalanced monthly. The S&P 500 is an index of the 500 leading companies in the U.S. and is designed to reflect the risk and return characteristics of the large-cap U.S. equities universe. The Bloomberg U.S. Aggregate Bond index is made up of the Bloomberg U.S. Government/Corporate Bond Index, Mortgage-Back Securities Index, and Asset-Backed Securities Index, and only includes securities that are investment grade quality or better, have at least one year to maturity, and have an outstanding par value of at least \$100 million. An options hedging strategy is available for this portfolio.
